1 in 100 children are born with a congenital heart defect, making it the most common type of birth defect. Congenital heart diseases are approximately 60 times more prevalent than a childhood cancer diagnosis. HeartGift provides life-saving congenital heart defect surgery to children from around the world where specialized medical treatment is either scarce or nonexistent. Established in 2000, the foundation has served nearly 500 patients, in over 34 countries, but there are many more children that need our help. We won't stop until every child born with a congenital heart defect has access to the surgery that will save their lives. Thank you for joining us in this mission!
